

# FREE CONSERVATION PLANS FOR CALIFORNIA FARMERS

## Get Prepared to Receive Implementation Funds

Interested farmers can work with staff to create the following types of plans: **Beneficial Bird Habitat Plan, Pollinator Habitat Plan, Carbon Farm Plan**

Together, we will assess your farm's natural resources and concerns, identify multiple opportunities for improvements and prioritize plans for the best outcomes.

The completed plans will include some of the following:

- An overview of your objectives and conditions
- Technical plan maps for existing and planned practices
- Design and implementation details including selected practices and locations
- A timeline for planting
- Plant lists
- Site preparation, maintenance and monitoring guidance

The plans will meet all requirements of USDA-NRCS's technical documentation, preparing you to apply for implementation programs, including those funded by NRCS, CA Dept of Food & Ag, and CA Dept of Fish & Wildlife.

Some of the many practices that could be outlined in the plans include hedgerows, windbreaks, riparian buffers, grassed waterways, filter strips and field borders.

Please complete the interest form at the link below and we will be in touch. Wild Farm Alliance will prioritize assistance to Socially Disadvantaged Farmers and Ranchers (SDFRs) and/or farms and ranches 500 acres or less.
